

Is the Government Hiding an Already Approved Cancer Cure from You?

I've uncovered the hidden agenda that is preventing Americans, like you, from accessing this cancer fighter that has already been approved for over 40 years!

Dear Reader,

It may shock you to learn that the government may be hiding an already-approved, natural cancer treatment from you.

This 100% natural extract has been an **approved** cancer treatment in Japan since the 1970s¹, and researchers are hailing it as the next big breakthrough in natural cancer therapies...

...yet very few Westerners know about it.

What's more, this natural substance has gained United States government approval for 7-million dollars in cancer trials^{2,3}...

...yet some branches of the government aren't releasing it to the public.

Why is such a promising new advance in cancer treatment being kept a secret from you?

Isn't this what "the war on cancer" corporations, charities, and researchers have been waiting for?

Well, to be frank, if a substance can't be approved as a drug, the mainstream media (funded in-part by big pharma) has very little to gain by reporting on it in full...

...if at all.

Think about it. What types of advertisements dominate media commercial breaks?

The vast majority of them are for prescription drugs.

And our "unbiased" networks certainly don't want to report on anything that may ruffle the feathers (or negatively affect the bottom line) of their highest paying sponsors.

What's more, it's been documented that these pharmaceutical giants pay their Washington lobbyists millions of dollars to manipulate drug legislature in their favor³.

So yes, big pharma DOES have a large say in what you get to hear about in the health segments of the daily news broadcast, not to mention other ad-based media outlets.

But that won't stop me from revealing the truth behind this hidden cancer fighter.

So, what is it?

It's not a new herb. It's not a vitamin It's not a plant or vegetable, super-fruit, mineral, or chemical.

Rather it is a *group* of ancient, naturally-occurring organisms....

These medicinal organisms have been used in Traditional Asian medicine for centuries to combat serious illnesses, and are so common that if you look closely, you may see one growing in your backyard.

Modern science has proven their effectiveness in fighting cancer^{2,3,7,8,9,10,11,12,13,14,25}, high cholesterol⁵, flu⁶, Alzheimer's disease⁷, and a slew of other ailments.

They have also been used to clean up toxic waste spills, and, as I said off the top, specific species are approved cancer treatments in Asia.

So what are these mysterious medicinal organisms?

The ancients have called them “the elixirs of immortality”.

Modern science considers them “nature’s ultimate immunotherapy”.

We call them, Super Spores—and in my 27+ years of practicing medicine I’ve never studied anything quite like them.

I’ll tell you about them in detail coming up, including how to get your hands on a free report that reveals all their prized and proven medicinal health benefits.

But first, let me tell you a story about The 7-Million-Dollar Super Spore...

The Rags to Riches Story of the “7 Million Dollar Super Spore”

This Super Spore #1 is known as “Tremetes versicolor” and has been used in Asian medicine for centuries to treat a variety of immunological diseases.

Based on its rich history, in 1976 Japanese cancer researchers patented a polysaccharide extract from the Spore called, PSK (polysaccharide peptide Krestin).

That same year, PSK was approved as an anti-cancer drug for the digestive system, lung, and breast and went into clinical use in 1977.

After 12 years of undeniable results, it was approved in 1989 as an oral adjunct therapy for use with conventional treatments to boost immunity and mediate damage caused by chemo and radiation.¹

In 1983, Chinese researchers isolated another immune-modulating polysaccharide from this same Super Spore known as PSP (polysaccharide peptide), which is now a commonly used anti-cancer treatment throughout Asia⁸.

Why do these polysaccharides work so well on cancer?

If you keep up on the latest health news, you’ve probably read about the new “it” drugs for treating cancer: immunotherapy drugs.

These drugs work by artificially “switching on” specific immune cells to attack cancer cells, and they are performing well on certain types of cancer.

This may *sound* like a grand innovation in cancer treatment, and compared to chemo and radiation it is a step in the right direction.

The problem is, these drugs can take a toll on healthy cells and tissues whilst attacking cancer cells.

This has led to a plethora of serious side effects on the endocrine, skin, renal, and gastrointestinal systems, to name a few.

In contrast, the natural polysaccharide immunocuticals found in *Super Spore #1* work in a similar fashion—by activating anti-tumor immune responses in the host—BUT without damaging healthy cells and tissue in the process⁹.

A win-win for cancer patients.

The studies on PSK and PSP are impressive to say the least...

A landmark study published in the prestigious medical journal “The Lancet” entitled: “Efficacy of immunochemotherapy as adjuvant treatment after curative resection of gastric cancer” found the addition of PSK to chemotherapy increased survival rates of stomach cancer patients¹⁰.

In this study, cancer patients were given a standard oral dose of 3 grams PSK daily for 4 weeks, alternating with the chemotherapy drug, 5-fluoruracil.

The results: patients increased their 5-year overall survival and diseases-free survival rate by over 18%!

Another study performed on over 100 patients¹¹ showed PSK, when combined with standard chemotherapy, also significantly increased survival in colorectal cancer patients.

While the closely-related PSPs have been shown to have significant immunologic and oncologic activity in cancers of the lung¹², gastrointestinal tract¹³, and breast¹⁴.

With results like this, you can see Super Spore #1 stands alongside conventional gold-standard cancer treatments in Asia.

But...where does that leave cancer-ridden Americans?

40 years later—with cancer closing in on heart disease as our nation’s #1 cause of death—American scientists get their big break in “immunocutical” research...

In 2012 Super Spore #1 was quietly approved for an American government-funded 5.4-million-dollar clinical cancer trial²

This trial allowed advanced prostate cancer patients to take the immune-boosting Super Spore #1 in combination with conventional chemotherapy.

The ultimate goal being to develop a side-effect-free cancer drug.

As you can imagine, getting government funding to study a natural cancer remedy unlikely to be approved as a drug was a miracle in itself.

But sadly, that miracle cancer trial was cut short...

In 2013 the trial was cancelled.

Why?

Apparently there were not enough eligible participants to complete the study.

How strange considering prostate cancer affects a whopping 1 in 7 American men¹⁵!

With such a large pool to draw from coupled with Super Spore #1's impressive safety record, you would think eligible participants would have been lined up around the block.

Perhaps if our media had done its job educating the public, the study, along with countless lives, may have been saved.

But it was not to be...at least not until later that year...

Thanks to the tireless efforts of doctors and researchers at Bastyr University and The University of Minnesota Medical School, a second 2-million-dollar trial of Super Spore #1's cancer-fighting ability was funded by the National Institutes of Health².

This time the subjects were stage I, II, and III breast cancer patients who had undergone surgery and chemotherapy.

Researchers hypothesized that breast cancer patients' health could be improved after radiation treatment if NK (natural killer) cell counts increased quickly to attack remaining cancerous cells.

Remarkably, this study garnered enough participants to be executed.

And the results were "significant" to say the least.

Super Spore #1 not only boosted Natural Killer Cell activity following radiation, but also boosted CD8+TCell activity (a white blood cell that kills cancer cells and other viruses), making it:

"A novel immune therapy with significant applications in cancer treatment."³

If it did this for breast cancer patients after their immune systems had been wiped out by chemo and surgery, imagine its potential for prevention and early-stage cancer treatment!

But how much will this "novel immune therapy" cost you?

A month's supply of the same Super Spore #1 supplement used in the 2-million-dollar cancer trial will set you back about \$1.00 a day.

No cancer drug on the market even comes close to offering these results, at this price, without serious side effects.

By now I'm sure you're beginning to see *why* I said these Super Spores are unlike anything I've ever studied.

The rags-to-riches story and science behind Super Spore #1 alone is enough to impress the toughest skeptics.

These contain a wealth of other protective, healing, and preventative chemical compounds that benefit a variety of diseases.

And you can learn all about Super Spore #1 plus six other hidden Super Spores in my latest special report:

“The Top 7 Super Spores You Should Be Taking Now”.

In this exclusive report, we'll show you the hidden research and health benefits behind 7 of the world's most researched and revered medicinal Super Spores.

These scientific studies prove their ability to protect your body against nearly every type of modern chronic disease including:

- Viruses⁵
- Bacteria¹⁶
- Cancers^{2,3,7,8,9,10,11,12,13,14,25}
- Obesity¹⁷
- Heart Disease¹⁸
- And even Diabetes¹⁹

Given that cancer alone is surpassing heart disease as the #1 killer in 22 states (and counting)²⁰, you would *think* our government would make such life-saving information available to its citizens.

But, when a natural remedy like Super Spores have:

A: an ancient history of traditional use, and

B: such a complex chemical makeup

They are highly unlikely to be approved as drugs because, let's face it, you can't make a lot of money from a natural organism that grows virtually anywhere in the United States!

Which means, there's no profit to be gained from promoting them.

And make no mistake: diseases like cancer and heart disease are BIG business for our government and pharmaceutical companies.

I take no pleasure in making that statement, but it's true.

Why else would amazing cures like this, and countless others be marginalized or down-right hidden from you?

That means YOU have to be YOUR OWN ADVOCATE in health.

Which is why, with your permission, I'd like to send you a free copy of this special report. *The Top 7 Super Spores You Should Be Taking Now*

I'll include some more details of what's covered in just a minute.

But right now I'd like to tell you a bit more about what makes these medicinals so unique in the field of cancer and chronic disease prevention.

You see, aside from being revered for their cancer-fighting immunocetical compounds, Super Spores also help *prevent* cancer in a way no other herb, drug, or supplement can.

Part of the reason these organisms have such strong medicinal properties, is because of their robust immune systems.

Yes! Just like humans, animals, and plants, Super Spores have immune systems of their own. And it's what they rely on to survive and evolve in harsh, unforgiving climates.

Scientists estimate Super Spores have existed longer than humans, hence they have developed powerful immunity and immunocetical compounds.

During their millions of years on earth, they have also developed an amazing ability to turn just about anything into a food source...

Which brings me to my next point on prevention.

It's called bioremediation

What is it?

It's the science of using natural organisms to break down hazardous substances into less toxic or non-toxic substances.

In this case, specific Super Spores are being used to mediate such cancer-causing toxins as diesel/oil, pesticides, industrial chemicals, PCBs, and heavy metals in the environment^{21,22,23}.

How is this possible?

In a word: enzymes.

Just like your body produces enzymes to digest foods, Super Spores produce enzymes powerful enough to absorb, break down, and even neutralize some of the world's most heinous carcinogens.

Scientists have compared this type of bioremediation to an environmental immune response.

Whereby the spores help boost the earth's immunity against toxicity...just as they have been proven to do for humans facing cancer.

This brings a whole new dimension to the world of disease prevention and treatment.

Remarkable, isn't it?

Let me now introduce you to Super Spore #2:

One of the most-studied Super Spores in the pioneering field of bioremediation

Super Spore #2 has been the subject of environmental studies and clean-up projects for its potential to break down and absorb:

- Pesticides^{21,22}
- Harmful bacteria like E. Coli^{21,22}
- Petroleum products^{21,22}
- Oil/diesel^{21,22}
- Mercury²³
- And industrial pollutants like PCBs, and dyes^{21,22}

And its effects on human health, particularly on lowering cholesterol⁵, is equally if not more exciting...

You see, *Pleurotus ostreatus*, Super Spore #2 contains naturally-occurring high levels of a chemical known as: Lovastatin⁴.

Does that term sound familiar?

That's because it's the same cholesterol-lowering chemical found in statin drugs.

Lovastatin helps with the hyper accumulation of LDL ("bad") cholesterol in the liver, which contributes to atherosclerosis, endocrine disruption, and heart disease.

For decades, I have warned patients against the unwarranted use of synthetic statin drugs because of their laundry list of dangerous side effects.

Plus, they are grossly over-prescribed.

In fact, if you're taking statins right now I'd encourage you to seek the advice of an integrative doctor to help you find a safer alternative.

And I'm not alone in my stance against statins.

In 2013, the "Open Journal of Endocrine and Metabolic Diseases" published a paper entitled: "The Ugly Side of Statins. Systemic Appraisal of the Contemporary Un-Known Unknowns", where they called out drug companies and research centers on withholding the truth about statins from the public, stating:

"These findings on statin's major adverse effects had been under-reported and the way in which they have been withheld from the public, and even concealed, is a scientific farce."²⁴

Plus, statins will not FIX the root cause of your cholesterol problem (if you even have a REAL problem), and include a laundry-list of side effects including:

- Memory loss
- Insomnia
- High blood sugar
- Fever
- Confusion
- Liver damage
- Trouble urinating
- Type 2 Diabetes
- And even in rare cases...kidney failure

Not to mention the lesser-known devastating nutritional side effects of statins.

In order to work properly, statins selectively rob your body of crucial, heart-healthy nutrients like: Vitamin D, Calcium, Magnesium, and CoQ10.

Deficiencies of the above can increase your risk of:

- Heart Disease
- Cancer
- Depression

- Muscle pain
- Fibromyalgia
- Osteoporosis
- Fatigue
- Tooth decay
- Fainting
- And lowered immunity, to name but a few...

With so much at risk, you can see why I highly recommend AVOIDING synthetic statins.

However, Super Spore #2 when eaten in its wholefood state, can provide a safe source of cholesterol-balancing Lovastatin...without the scary side effects.

But the benefits of Super Spore #2 don't stop at mediating toxic waste and lowering cholesterol.

Like Super Spore #1, Super Spore #2 Has Been Proven to Selectively Inhibit Cancer Cells²⁵

Though better-known for its heart-health benefits, Super Spore #2 has also been shown to inhibit breast and colon cancer cells by suppressing tumor growth while not affecting normal cells²⁵.

A therapy that targets cancer cells without harming normal cells is known as "the holy grail" of cancer treatment, so these findings are significant.

These Two Super Spores are just the tip of the iceberg of the amazing multi-faceted organisms you'll learn about in your free report:

"The Top 7 Super Spores You Should Be Taking Now"

Over the last few pages I've introduced you to the super powers behind one of nature's most remarkable edible organisms: Super Spores. Not only can they help fight cancer^{2,3,7,8,9,10,11,12,13,14,25} and lower cholesterol⁵, but they can stop carcinogens at the source through bioremediation^{21,22,23}.

If that's not enough to get you fired up, let me share more details about this exclusive report...

In "The Top 7 Super Spores You Should Be Taking Now" you'll discover:

- How to erase wrinkles and protect your DNA by using the "diamond of the forrest"²⁶.
- The "herb of good fortune" that regulates blood pressure 100% naturally for just 11 cents a day²⁷.

- Which Super Spore extract can stop and prevent viruses like Herpes²⁸ and the dreaded flu⁶.
- An Olympian secret to boosting stamina and endurance²⁹.
- The best Super Spore to eat for increased fat metabolism and weight loss¹⁷.
- How women can shield themselves from BPA (plastic)-induced reproductive damage with the “vegetable caterpillar”³⁰.
- How the “elixir of life” can help you recover from a stroke³¹.
- The best little-known Super Spore for Type 2 Diabetes¹⁹.
- And (if you can believe it), so much more...

All this invaluable information is yours completely free just for trying my newsletter called: *The Doctor's Health Journal of Alternative Remedies and Cures*.

The Doctor's Health Journal of Alternative Remedies and Cures is the monthly newsletter that provides you with the natural choices you need to avoid prescription drugs and risky surgery.

Every month you'll get timely information and advice that will help guide you through the confusion we see so much in the health world today. You'll only get the straight facts on natural healing techniques.

And coming up, I'll tell you how you can test-drive *The Doctor's Health Journal of Alternative Remedies and Cures*, and get your free Super Spore report.

But before I do, I'd like to share one final “Super Spore gem” with you, and it may be the most precious if you or a loved one are facing cognitive decline.

Super Spore #3 Can Protect you from Alzheimer's and other Neurological Disorders⁷

Alzheimer's is a serious and crippling disease with no agreed-upon cause or cure in mainstream medicine.

However, once again, these miraculous Super Spores offer great hope.

Super Spore #3 has been used in Asian medicine for centuries for nervous complaints, and has been called “one of the best kept secrets in the West”.

One of America's best known mycologists, authors, and speakers Paul Stamets, considers it a “smart natural remedy”, and recommends everyone over 50 should take it.

Why? Two reasons:

#1: It is the only Super Spore to have demonstrated the ability to help stimulate synthesis of Nerve Growth Factor (NGF)⁶ which is responsible for maintaining survival and regeneration of neurons in your nervous system.

This is significant, as in cases of neurological disorders, like Alzheimer's, the brain is unable to manufacture NGF on its own.

#2: It can regenerate lost or damaged nerves in the brain³².

It goes by different names throughout the world, but to Westerners lucky enough to know about it it's called: Lion's Mane.

And I would echo Mr. Stamets' recommendation that everyone over the age of 50 should at least consider learning more about it...which you can when you are e-mailed your free report.

Remember, it is never too late to take back your health!

If you're reading this and think you're too far gone or it's too late to change your health, I'm here to tell you that you are dead wrong.

The miraculous nutrients and compounds found in nature, like the Super Spores we've learned about today, have been known to reverse even the most chronic cases of illness.

Nature always has a solution for modern ailments. Which is why I urge you to take advantage of this special offer to subscribe to: *The Doctor's Health Journal of Alternative Remedies and Cures*.

Here are some of the issues we helped our subscribers with recently:

- Two foods that can fight inflammation – Prescription anti-inflammatory drugs can be dangerous to your health. You can fight inflammation with just two nutrients that can easily be found on a table in an Italian restaurant!³³
- Fight your osteoarthritis with these three nutrients – If you take prescription medication, you have to try these three supplements. They could work better... without nasty side effects.³⁴
- Can bananas, pineapple, or papayas give you a flat stomach? We revealed which is reality and which is myth in a past issue of the newsletter.³⁵
- Eat this and lower your risk of having a stroke – This one nutrient has been proven to lower your blood pressure and your risk of stroke.³⁶
- Over 60? In a recent issue, we revealed why prescription pills side-effects are much more harmful if you're in this age range.³⁷

The Doctor's Health Journal of Alternative Remedies and Cures is written every month in an easy-to-read format.

There's no scientific jargon or anything else to confuse you. We present the facts in plain English. We also include a glossary if there's a term we think could get a little complicated.

Once you read your first issue of *The Doctor's Health Journal of Alternative Remedies and Cures*, I'm sure you'll agree that it is one of the top health newsletters as it covers a wide array of timely health issues in one, easy-to-read journal.

Try *The Doctor's Health Journal of Alternative Remedies and Cures* and: "The Top 7 Super Spores You Should Be Taking Now" for just \$1.00

The regular price for *The Doctor's Health Journal of Alternative Remedies and Cures* is \$199 for a one-year (12 issues) subscription.

Our first year introductory price is just \$39.95 for the first year. A great deal itself!

But, because I feel so strongly that you deserve to know these and other "health secrets" that have been hidden from you, I'd like to offer you a special reduced rate for first-time subscribers of only \$29.95.

Through this exclusive offer, you can start your first one-month subscription for just \$1.

Here's exactly how it works:

Subscribe today and we'll charge your credit card just \$1.

You'll be e-mailed your first issue of the *The Doctor's Health Journal of Alternative Remedies and Cures* newsletter and your free report: "The Top 7 Super Spores You Should Be Taking Now" within 28 business hours.

Take 30 full days to read everything we've sent.

If you're not happy with your subscription or the special reports or anything, just give us a call to cancel. No questions asked, and you get to keep everything we sent you as a thank you for trying our newsletter.

You will have risked \$1 and nothing more. Less than the cost of a cup of coffee.

On the flip side, if you decide within 30 days that you love your *The Doctor's Health Journal of Alternative Remedies and Cures* subscription and want to keep getting the issues e-mailed to you every month, then simply do nothing.

After 30 days, we'll conveniently charge your credit card \$28.95 to complete the full year subscription.

So, \$1 for your first issue and free report, then if you decide to continue your subscription after 30 days, it's just \$28.95 for the entire year.

Your satisfaction is 100% GUARANTEED!

One more thing: Even if you decide you love *The Doctor's Health Journal of Alternative Remedies and Cures*, but later on decide that you don't want it any more, let us know and you'll receive a FULL REFUND on all unmailed issues.

You may keep your FREE Report—No Matter What! That's how confident we are that you'll love the health results and information you get from *The Doctor's Health Journal of Alternative Remedies and Cures* .

If you're ready to finally get healthy... feel young and alive...lose weight... relieve pain... gain more energy...learn the REAL facts behind the latest natural health breakthroughs...live free from prescription drugs...help protect your loved ones from disease... take back control of your health...and much more ... Then click on the button below and try *The Doctor's Health Journal of Alternative Remedies and Cures* for yourself.

Just click on the button below today.

Sincerely,

Victor Marchione, MD

Chairman

Doctor's Health Press Editorial Board
